INTRODUCTION BULLETS

Bullets is the BioControl Information Bulletin

- BioControl proudly presents 'Bullets', its Information Bulletin to warrant complete information exchange of relevant product information to its distributor network.
- Bullets can contain information of a 'commercial' nature, such as new products, features, add-ons, software versions and part nr. structures, but also information of a 'technical' nature, such as manual updates, bug fixes, necessary upgrades and hardware modifications.
- Bullets will be short and to the point to give you information updates in short reading time. It is your ammunition to keep shooting sharp in your battle in the field.
- We strongly advise that all Bullets are read carefully, stored and distributed to the concerning persons in your organisation and distribution network. If so required, please contact us to also receive the Bullet as Word document for translation purposes.

Bullets numbering system

- Bullets are grouped in sections so that you only receive information on what you are distributing.
- The following Bullet sections are available. Numbering within a section will be consecutive.

Section	Starts from	Subject
1	B10001	Mobile Readers and accessories
2	B20001	Stationary Readers and accessories

Bullet distribution

- Bullets will not be distributed via email, but can be downloaded from the 'Community' section on the BioControl website. Please contact us for a username and password for access to this section.
- Bullets are numbered consecutively. The website also contains a listing of previous Bullets so that the completeness of your off-line information package can be verified.

We trust to have informed you sufficient and look forward to being of service to you.

With best regards,

BioControl / Mobile Readers
